SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/27/2025 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/17/2025 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal (Superfund) equivalent sites

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/21/2025 has revealed that there are 38 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 58 CA LUST sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 10 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that there are 71 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/11/2024 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

PFAS RCRA MANIFEST: To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

A review of the PFAS RCRA MANIFEST list, as provided by EDR, and dated 03/23/2025 has revealed that there is 1 PFAS RCRA MANIFEST site within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there are 18 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 43 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 3 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as e-Manifest, will modernize the nation's cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 54 E MANIFEST sites within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 34 CA CUPA Listings sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Site History: 1992 In September, a waste oil underground storage tank was removed and a fuel leak investigation case was opened (06S1W35K05f) and the case closed on 9/20/96. 1997 In September, it is reported that a soil gas survey was conducted prior to a property transaction. The report of this work was not found in the file. The information presented here is from summaries contained in later reports. Maximum concentrations of 6,100 parts per billion by volume (ppbv) total purgeable petroleum hydrocarbons calculated as Gasoline (TPPH-g), 77 ppbv benzene, and 1,400 ppbv methyl tertiary butyl ether (MtBE) were detected. Locations of samples are not known. 1998 In December, 1 Geoprobe boring (EB1) was advanced onsite to 17 feet below the ground surface (ft bgs). 3 soil samples were collected and reported to contain maximum concentrations of 505 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 0.0667 ppm benzene, 6.26 ppm Ethylbenzene, 2.56 ppm Xylenes, and 3.44 ppm MtBE. A grab groundwater sample was collected and reported to contain 17,000 parts per billion (ppb) TPHg, 74 ppb benzene, 197 ppb Toluene, 56.1 ppb Ethylbenzene, 2,130 ppb Xylenes, and 3,830 ppb MtBE. Product dispensers and piping were replaced. 4 soil samples (D1 through D4) were collected from beneath the dispensers between 2-2.5 ft bgs and 3 soil samples (P1 through P3) were collected along the piping at 2.5-3 ft bgs. The maximum concentrations reported for the piping samples was 12.2 ppm TPHg, 0.199 ppm Benzene, 0.045 ppm Toluene, 0.784 ppm Ethylbenzene, 0.194 ppm Xylenes, 2.75 ppm MtBE, and 18.7 ppm Total Lead. The maximum concentrations for the dispenser samples were 339 ppm TPHg, 1.99 ppm Benzene, 1.81 ppm Toluene, 5.16 ppm Ethylbenzene, 13.8 ppm Xylenes, 84.6 ppm MtBE, and 20 ppm Total Lead. Additional excavation was conducted in the area of sample D1 to a depth of 6 ft bgs. Sample D1B was collected at 6 ft bgs and reported to contain 16.1 ppm TPHg, 0.013 ppm Benzene, 0.011 ppm Toluene, 0.17 ppm Ethylbenzene, 0.041 ppm Xylenes, and 1.89 ppm MtBE. 1999 In June, 3 groundwater monitoring wells (MW-1 through MW-3) were advanced to 15 ft bgs. 7 soil samples were collected and reported to have maximum concentrations of 1,300 ppm TPHg, 0.063 ppm Benzene, 2.5 ppm Toluene, 29 ppm Ethylbenzene, 130 ppm Xylenes, and 0.12 ppm MtBE. Periodic groundwater sampling began at the site. 2000 In March, a batch extraction test was conducted on a tank complex vadose monitoring well TB1. Reportedly, there are 3 tank complex vadose monitoring wells installed within the tank pit (TB1 through TB3). Approximately

50 gallons of groundwater were removed and the well was dewatered. Drawdown was not recorded in nearby wells. Another test was conducted on well MW1, which dewatered immediately and did not produce a significant volume of water. In August, 4 groundwater monitoring wells (MW-4 through MW-7) were installed on and offsite to approximately 15 ft bgs. Soil samples were not collected and submitted for laboratory analysis during this investigation. The new wells were incorporated into the monitoring program. 2001 In September, 5 Geoprobe borings (B1 through B5) were advanced onsite to 30 ft bgs as part of a transect study. 24 soil samples were collected and reported to have non-detectable to low concentrations of the Constituents of Concern (COCs). 15 depth discrete grab groundwater samples were collected. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) were not reported to be present in any of the samples above the laboratory reporting limits. The maximum concentration of 45,000 ppb MtBE was reported for the sample collected from 11 ft bgs in boring B4. Deeper samples collected from this boring decreased to 3,500 ppb MtBE. 2002 In January and February, 8 Geoprobe borings (B6 through B13) were advanced offsite to depths ranging from 31 to 42 fbg as part of a transect study. 23 soil samples were collected and reported to have non-detectable to very low concentrations of COCs. 21 depth discrete grab groundwater samples were collected and reported to have maximum concentrations of 230 ppb TPHg, 1 ppb Benzene, 0.99 ppb Toluene, 1.2 ppb Ethylbenzene, 8.7 ppb Xylenes, and 840 ppb MtBE. The transect study concluded that dissolved TPPH-g (sic) and benzene impact downgradient of the site do not appear to warrant further investigation or remediation. And that the detected concentration of 840 ppb MtBE in the location of boring B-8, approximately 250 to the north of the site, is generally consistent with historical analytical data for existing monitoring well MW-7. And that the Dissolved MtBE impact approximately 500 feet north-northwest of the site attenuates to a concentration of 23 ppb, as quantified by analytical data for boring B-10, sampled during this investigation. In April, 3 shallow extraction wells (EW1, EW3 and EW4) to 25 ft bgs and 1 deeper extraction well (EW2) to 35 ft bgs were installed onsite. 10 soil samples were collected and reported to have non-detectable to low concentrations of COCs. The new wells were incorporated into the monitoring program. Wells EW2 and EW3 were installed adjacent to each other and based on the gauging data, there is an upward vertical hydraulic gradient from the deeper water-bearing zone toward the shallow water-bearing zone. In October, groundwater extraction from EW-1 and EW-3 commenced and continued through September 2004. Groundwater was extracted and stored in an onsite holding tank and hauled offsite. As of June 24, 2004, approximately 425,650 gallons of groundwater had been extracted, and approximately 4.0 pounds of TPH-g and 4.5 pounds of MTBE had been removed. 2003 In July, 2 groundwater monitoring wells (MW8 and MW9) were installed offsite to 17 ft bgs. 6 soil samples were collected and were not reported to have concentrations of the COCs above the laboratory reporting limits. The new wells were incorporated into the monitoring program. An underground conduit survey was conducted and concluded that a 78-inch storm drain beneath De La Cruz Boulevard and the telecommunication conduit beneath Martin Avenue were in contact with groundwater. Based on proximity, size, and local groundwater flow direction, the conduit likely to have the greatest influence for acting as a preferential pathway for the migration of hydrocarbon-impacted groundwater is the 78-inch storm drain that

underlies De La Cruz Boulevard. Shaw also notes that the 33-inch storm drain and 24-inch sanitary sewer lines underlying De La Cruz Boulevard and the 12-inch sanitary sewer line and the 33-inch storm drain underlying Martin Avenue, may have been in contact with groundwater previously, based on historical depth to groundwater data. 2004 In August, 10 ozone sparge wells (C1 through C10) were installed between 18 and 22 ft bgs onsite. The ozone sparge system began operations in October and ran through May 2008. 2007 In September, 2 hydraulic hoists and 1 clarifier were removed from the site. 1 soil sample was collected from each hoist between 9.7 and 9.9 ft bgs and were reported to have maximum concentrations of 6.1 ppm TPH as Diesel (TPHd), and 53 ppm Hydraulic Oil. 3 soil samples were collected in association with the clarifier and piping; the depths of these samples were not reported. Maximum concentrations of 360 ppm TPHd, 2,300 ppm Hydraulic Oil and 110 ppm Total Oil and Grease (TOG) were reported for sample PIPE-2. Soil was excavated in the area of this sample to remove impacted soil and sample PIPE-3 was collected from 10 ft bgs. PIPE-3 was reported to contain 8.68 ppm TOG, 33 ppm Chromium, 18 ppm Nickel, 50 ppm Lead, and 53 ppm Zinc. Approximately 47.7 tons of soil was removed from the site.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Source: CERS,

Site ID: 361466
Site Name: Google LLC - Aviation
Violation Date: 03-30-2022
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 04/28/2022. Facility could not provide documentation of initial or annual emergency response training pertaining to the facility's Hazardous Materials Business Plan for all employees working at this facility. Per Ms. Wenger, emergency response training is conducted initially and an annual refresher is provided, however documentation could not be provided at the time of this inspection. Provide either electronic or hard copies of training documentation for employees at this facility and ensure a minimum of three years of records are available for inspection.

Violation Date: 03-30-2022
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.
Violation Notes: Returned to compliance on 04/28/2022. Per the most recent CERS submittal and confirmed during site inspection, the property owner for this facility is the City of San Jose, however facility was not sure if a Property Owner Notification has been submitted to the Property Owner notifying that they are subject to and in compliance with all HMBP requirements. Correct all other violations noted in this report, then provide a one-time written notification to the property owner. Provide a copy of the notification to our office for review, and retain a copy on-site for your records. A sample letter was provided

Site History: The October 5, 1992, Sump Removal Soil Sample Laboratory Report that presents soil data collected during the excavation and sump removal on September 23, 1992. This results showed low concentrations of metals (chromium, lead, copper, and nickel), petroleum hydrocarbons, and methyl chloride in soil. The metal and petroleum hydrocarbon concentration are all less than our commercial environmental screening levels (ESLs). The maximum methyl chloride concentration of 8.64 milligrams per kilogram (mg/kg) exceeds our commercial ESL of 0.19 mg/kg associated with potential leaching to groundwater concerns but is below our commercial ESL of 25 mg/kg associated with direct exposure to soil. Based on the August 16, 1993, Addendum to the

Environmental Assessment that concludes that there is low likelihood of hazardous materials present in the subsurface from the former underground storage tank (former sump). This conclusion was based on a regulatory agency file review and personal communications with staff of the Santa Clara Valley Water District who stated that there was no evidence of a release of fuel based on visual inspection of the sump and soil within the excavation and the soil analytical data. Based on the above information, we closed this case on June 16, 2020.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History: The Regional Water Board's determination that the subject site is not a case is based on the following reasons: 1. very low concentrations of TCE were detected in the soil samples 2. the lack of a known onsite source for TCE detected in the soil and groundwater samples 3. Concentrations of TCE in groundwater are below the vapor intrusion ESL As stated in the May 22, 2015 letter, this determination may be revised if the land use changes or if additional soil, soil vapor, or groundwater quality data becomes available.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well

as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous

waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 11-13-2018
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Tiered Permitting Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: Per the chart recorder, the facility discharged a pH 13 hazardous waste to the sanitary sewer for approximately 140 minutes between the hours of 7:00pm-10:15pm on 7/16/2018. The facility is continuing the investigate the cause of the release, but primary influents to the treatment system consist of low pH rinse water and low pH bath discharges. All resist stripper and cupric etch are collected and managed as hazardous waste, and not discharged to the treatment system. The developer bath, consisting of 8% potassium carbonate, was pH tested at the time of inspection and confirmed to have a pH of approximately 11. Employees state that the developer is discharged to the sanitary sewer when the pH is lowered just above 10 through normal use and the bath is not maintained above a pH of 11.2. Per employees, no caustic rinses are used for tank cleaning or preventative maintenance. 50% caustic soda is continuously fed into the neutralization tanks to elevate pH prior to [Truncated]

Citation: 22 CCR 45 67450.3(c)(5) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(5)
Violation Description: Failure of the owner or operator discharging any effluent or treatment residuals to meet the applicable discharge requirements.
Violation Notes: Returned to compliance on 10/14/2020. Per the chart recorder, the facility failed to remain compliant with applicable industrial wastewater discharge requirements by discharging a pH = 5.6 for 2 minutes on 7/11/2018 and a pH=13 for 140 minutes on 7/16/2018 and was issued a Notice of Violation by San Jose-Santa Clara Regional Wastewater Facility. Compliance with all industrial wastewater facility requirements must be maintained in order to maintain authorization for on-site hazardous waste treatment.

Citation: HSC 6.95 25510(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25510(a)
Violation Description: Failure to report a release or threatened release of a hazardous material to the unified program agency and to OES.
Violation Notes: Returned to compliance on 10/14/2020. On 7/16/2018, the facility discharged a pH 13 hazardous waste to the sanitary sewer for 140 minutes, but did not notify California Office of Emergency Services or Santa Clara Fire Department/CUPA. Immediately upon discovery of a release or threatened release of hazardous material, the facility must notify California Office of Emergency Services (1-800-852-7550) and the local unified program agency (Santa Clara Fire Department/CUPA).

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History:

The site resides in a commercial area of Santa Clara and consists of the westernmost unit of a 20,000 square foot (SF), multi-tenant commercial & industrial building with individual addresses ranging from 440 through 448 Robert Avenue. According to a report by Shaw Environmental dated 2005, a 2,000 gallon Underground Storage Tank (UST) was installed outside the southwest corner of the site building after the building was constructed in 1960. The UST was used from approximately 1971 to 1973. The tank was not used from 1973 until its removal in 1990. Records indicate that approximately 125 cubic yards (CY) of soil were excavated concurrent with the tank removal. Following the UST removal, groundwater monitoring wells were installed on the site and its vicinity in 1992, 1995, and 2000. In addition, a site investigation occurred in 2005 consisting of Hydropunch, Geoprobe, Cone Penetration Testing Procedure (CPT), and Pore Pressure Dissipation Tests. The site is located in the Santa Clara Valley, at the southern end of the San Francisco Bay. The San Francisco Bay resides in a broad depression between the San Andreas and Hayward fault systems. This area lies within the Coast Range Physiographic Province, characterized by northwest-southeast trending valleys and ridges, between the Pacific Ocean to the west and the Great Valley to the east. The oldest known bedrock in the Coast Range Province is marine sedimentary and volcanic rocks from the Franciscan Assemblage. Geologic formations in the San Francisco Bay Region range in age from Jurassic to recent Holocene. The site lithology is relatively homogeneous in the upper 30 feet, primarily consisting of cohesive, silty clay soils with minor interbedded silty sands. From approximately 30 feet below grade (fbg) to the maximum depth explored of 44 fbg, coarser grained materials are present. No logs of wells MW-1 through MW-6 or VEW-1 were available to describe subsurface sediments. Boring B-5 was the only available log, and describes sandy clay in the upper 7.5 feet. The site is located in the Santa Clara

Sub-basin of the Santa Clara Groundwater Basin, designated with Basin ID 2-9.02 (DWR 2003). The Santa Clara Groundwater Basin is a northwest trending alluvial basin, bounded on the northeast by the Diablo Range and on the southwest by the Santa Cruz Mountains. The Santa Clara Sub-basin aquifer system consists of unconsolidated sediments of Quaternary age. The Santa Clara Valley Water District Groundwater Management Plan, July 2001, cites that basin lithology beneath the subject site consists of a series of low permeability clay and silt layers, resulting in confined conditions at depth beneath the site. Shallow groundwater occurs within these low permeability clays and silts. In the area average annual rainfall is approximately 24 inches and is received primarily between November and March. Throughout most of the Santa Clara Valley Sub-basin, regional water level contours show that the direction of groundwater flow is generally northwesterly, towards San Francisco Bay, with some localized variation. Groundwater flow direction typically correlates to topography. Recent groundwater level measurements from December 2008 indicate a northeasterly flow direction beneath the site. The first water-bearing zone beneath the site was encountered between 5 and 7 fbg during the investigation conducted in 2005. 1960 through 1973 UST Installation and Usage: A 2,000-gallon UST was installed outside the southwest corner of the site building sometime after the building was constructed in 1960. Previous reports indicate that the UST was used from approximately 1971 until 1973 to dispense motor fuels to delivery vans. The previous reports also stated that the tank remained unused from 1973 until its removal in 1990. 1990 - UST Removal and Excavation of Impacted Soil: The 2,000-gallon UST was removed in 1990. Approximately 125 CY of gasoline impacted soil was excavated during the removal. No information regarding conditions encountered during the tank removal, confirmed excavation limits, or compliance sampling results have been located. 1991, 1995 and 2000 - Monitoring Well Installation: Groundwater monitoring wells were installed at the site on four different occasions. It was reported that wells were installed during two field operations in 1991, and also in 1995 and 2000. Groundwater monitoring and analytical data indicate that wells MW-1 and MW-2 were installed in 1991, although report texts have stated this occurred in 1992. Wells MW-3-J and MW-4 were installed in 1995 and wells MW-5, MW-6 and VEW-1 were installed in 2000. Periodic groundwater monitoring and sampling began in August 1991 with wells MW-1 and MW-2, then occurred again after the installation of wells MW-3-J and MW-4. Since October 1998, sampling frequency has fluctuated between quarterly and semi-annually. 2005 In-situ Chemical Oxidation Remediation: In-situ chemical oxidation (ISCO) remediation was conducted for several years through mid-2005, via the monthly introduction of hydrogen peroxide solutions into several site monitoring wells. The remedial approach was discontinued with agency concurrence because it appeared to be only partially effective. 2005 - Environmental Document Review and Site Investigation: Shaw Environmental, Inc. (Shaw) reviewed historical environmental documents for the site and inferred that the Site Conceptual Model (SCM) may have been flawed (Shaw, 2005). To date, no records of an SCM report have been located. Shaw conducted a Cone Penetrometer Testing (CPT) investigation in November 2005 to further characterize conditions beneath the site. Data suggest that the water table may have been much lower during the 1970 s, when a fuel release appears to have occurred, and that a significant mass of immobile hydrocarbons might be present at depths down to 25 fbg. evidenced by soil sample analysis from boring B-5 showing up to 2,000 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as gasoline (TPHg) at 25 fbg. Although well completion records are not available, groundwater monitoring data sheets indicate that deepest site well is MW-1 with a total depth of 20.8 fbg. Therefore, it is surmised that this residual mass lies beneath the depth of many, if not all, site wells and, therefore, below any effective depth of treatment using those wells.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
